Welcome

Welcome to Prioritree! Prioritree is a task managing program that will allow you to organise your life through the use of making dynamic lists and keeping track of important events and people.

Getting started

To begin, open up Prioritree.pyw and enter a username. This will be your unique profile in Prioritree in which all of your information will be kept. You can switch to a different profile at any time and create as many as you want.

Click any of the views at the bottom of the screen to continue.

>> Learn about the interface

User Interface

There are five main parts of the interface that make up Prioritree.

These are:

- 1) Main toolbar
- 2) Reference Book
- 3) Todos
- 4) Input bar
- 5) View bar

The main toolbar in the top left is for all of your todo and account management. You can add, delete, select todos here and also make them subtasks, questions, longterm, change the date and category and switch accounts or log off.

The reference book in the top right is where you store all of the data that you may need for future reference. This includes contact details, event details, reminders, useful URLs and a planning space.

The section in the middle is where you will view your todos.

The input bar is where you enter new todos and set a date and category for them if necessary.

The view bar at the bottom allows you to view your tasks in different ways.

A note about installation and backup

At this point in time, Prioritree has not been compiled to run without Python installed on your computer. However, it is a very small and simple download and can be found here: <https://www.python.org/downloads/>

This means Prioritree does not require any installation if you have Python on your computer.

Simply open Prioritree.pyw!

However please note that none of the files or directories in the Prioritree folder should be moved around as this will cause problems with the operation of the program. This being said, you are free to move, delete, backup any files in the userdata and userdata/plans directories, as long as the directories themselves are left unchanged.

The userdata folder contains all of the databases for the accounts you may have created, and each database contains that accounts data, excluding plans, which are found in userdata/plans. A simple copy and paste of these files to another location will back them up.

Main Toolbar

Add

This button will take you instantly to the input bar ready to add a todo.

Enter the text you would like as a todo.

Enter a category in the box or pick an old one from the dropdown list. Leave it blank for no category.

Press the calendar to set a date. Enter a date in the form dd/mm/yy and press enter on your keyboard to set it.

When you are ready, press the tick, or enter if your text cursor is in the input bar, and your todo will be added.

Delete

This button will allow you to remove any todos you have added.

Click it and then click a todo to delete it.

Alternatively, select multiple todos with the select tool and delete them all at once.

If you delete a todo with subtasks, they will all be deleted, however you can still delete subtasks individually.

>>> [Learn about the select tool](#)

Select

This button gives you the ability to select multiple todos at once.

Click the button followed by the specific todos you would like to select.

You can now do the following things as a group:

- Delete them
- Add them as subtasks to a todo
- Change their date
- Change their category

Please note if you would like to add subtasks in a specific order you can select todos in that order and it will be maintained when you add them to another todo.

Press cancel to stop selecting.

Subtasks

This button will allow you to give a todo an indented list of subtodos if you so desire.

Click the button, click a todo to apply subtasks to, and then enter your desired subtask.

Keep in mind that subtasks will inherit their parent's date and category so cannot be applied individually.

Once you have entered a subtask and pressed the tick or enter, the todo will become a subtask. You may enter more after this to continue adding to the same todo.

Alternatively use the select tool to select a group of todos, click the subtask button, and then click a parent todo to apply all of the selected todos to.

This button is also used to add to question lists.

Please note if you would like to add subtasks in a specific order you can select todos in that order and it will be maintained when you add them to another todo.

Keep in mind that when a parent is ticked, all of its subtasks become ticked as well.

>>> [Learn more about questions](#)

Questions

This button will turn a todo into a question todo, meaning the main todo will have two sublists; a yes and a no list. Todos can be added to both but once one is checked on either side, the other list will be disabled.

To use it, click the button and then click the todo that you would like to be made a question.

Now you can use the subtask button to add to either list by clicking the yes or no labels and typing in a todo. As with normal subtasks, question subtasks inherit their parent's date and category.

Long term

Long term todos are a special kind. They are meant to be completed over a longer period of time and have a progress bar to correlate your percentage of completion in that particular task. They are not grouped with the rest of the todos, rather on their own in the 'Long term view'. This can be reached by pressing the view at the bottom of the screen or via the button which will take you straight to the input bar in long term view.

Add a todo in this view and it is automatically made long term and will be displayed with a progress bar set at 0%.

Use the subtask button to add todos to split up the task. Once you click it, choose the longterm todo and enter the subtask, you will be asked what percentage through the task this todo will be anchored at. Enter a value and press OK. Now if you are to check this subtask the bar will progress to the percentage you entered. As normal, you can continue adding subtasks to this todo from here.

If you tick a todo further into to the task than another one, the previous todos will be ticked and disabled. However you can uncheck the last one and uncheck back one by one if you wish.

For example, if you are do an assignment and tick 'Start essay' at 40% without ticking 'Do research' at 20%, the 20% subtask will automatically completed.

When you tick the parent todo, you will be asked if you want to permanently complete the task. In this case, the entire todo will become disabled as the progress bar reaches 100%. Congratulations, you made it! Otherwise it will remain as it was.

You can use the delete tool to delete subtasks or the entire todo.

You are not limited to one long term task.

Date

This button will set a date for a todo and its subtasks. In daily view only the tasks set for that day will be visible unless you change the day, and the same goes for weekly view.

Click the date button, a todo you would like to set a day for, enter the day in the form DD/MM/YY and press enter to apply the todo to this day.

Alternatively you can select multiple todos with the select button, click the date button, input a date and press enter and it will be applied to all of them.

When entering a new todo in the input bar, before confirming it, press the date button next to it, input a date and press enter to set the date for it.

When in the date input box pressing escape will close it.

>>> [Learn more about daily view](#)

>>> Learn more about weekly view

Categories

Categories give you the option to apply a certain theme to a group of todos, including questions.

To do so, enter a new category into the box at the top or click the drop down menu and choose a defined category. Then choose a todo to apply this category to.

Alternatively, use the select button to select a group of todos, and then enter or choose a category to apply it to all of them.

Todos will then be labelled with their respective categories, or grouped into these categories in category view.

>>> Adding new todos with categories

>>> Editing and deleting categories

Editing categories

Click the button to the right of the category bar to edit or delete categories.

Click edit or remove in the new window and then select the category you want.

Rename allows you to enter a new name for the category as a whole.

Remove will delete the category from the database. You will be asked if you want to remove the todos attached as well.

Switch account

Click this button and enter a different username to instantly log out of the current profile and enter the new (or existing) one.

Log off

Click this button to return to the log in screen.

Help

Click this button to...wait a second, now you're just messing with me.

Reference Book

Contacts

Click this button to open your contacts, which will list on the right hand side of the program.

Use the plus button on the right to add a new contact. You can enter a name, address, phone number and email as details. Press save to save it or back to cancel.

If you want to view or edit a contact click it in the list. The details will be brought up. Click edit to alter some of the details, delete to delete it or back to return to the list.

Press close to close the frame.

Events

Click this button to open your events, which will list on the right hand side of the program.

Use the plus button on the right to add a new event. You can enter a title, location, date in the form DD/MM/YY, time in the form HH:MM and description of the event. Press save to save it or back to cancel.

If you want to view or edit an event click it in the list. The details will be brought up. Click edit to alter some of the details, delete to delete it or back to return to the list.

Press close to close the frame.

Reminders

This button lets you add reminders to the notification bar at the top.

Press the button to open the reminders list on the right hand side of the screen and press the plus to the right to add a reminder.

You can enter the title and description of the reminder and tick whether you would like it in the notification bar (which not be seen if no reminders are added).

You can click on a reminder in the list to edit it (you must do this to add or remove it from the notifications) or delete it.

You can add as many reminders as you want to the notification bar.

Press close to close the frame.

URLs

Press this button to open up your saved URLs. Click the plus on the right to add a new one. Click on a URL in the list to edit or delete it.

Press close to close the frame.

Plan

Click this button to open your planning space. You can type whatever you want here for whatever reason, whether you want to make some quick notes or just for fun.

Click save to save your planning and you can view it when you open the plan again, including when you log back on with the same account.

Press close to close the frame.

Views

General view

This view is the introductory page, and clicking the button will take you to sequential view and show you basic tips to get started.

Sequential view

This can be accessed by pressing the button labelled sequential view at the bottom.

In this view, all of your todos will be displayed in the order you added them (apart from subtasks which will be displayed under their respective parent todo).

If you have applied a date and/or category to a todo, they will be displayed next to each individual one.

Daily view

Similar to sequential view, but only displays todos set to the day you are viewing.

To change the day you are viewing, click the left or right arrows in the bottom right.

Weekly view

Similar to daily view, but show all todos that you have applied to days in the week you are viewing.

Weeks start on the Monday and end on the Sunday, so if it is Wednesday, you will see todos from the last two days, current day, and following four days.

Press the left or right arrows in the bottom right to change the week.

Category view

In this view, todos will be grouped into their categories, and the categories will be ordered alphabetically.

Todos without a category are displayed last.

Question todos and subtasks are grouped just as the normal todos are.

Long term view

In this view, only your long term todos will be shown, and only here. Each one has a progress bar, and the subtasks set how far you have progressed to completion.

The input bar creates long term todos and long term subtasks when the subtask button is clicked.
